## Reviews

5 out of 5 (based on 3 ratings)

Straight (No Wobble)

Like another reviewer, I purchased two steppers from another (robotdigg) vendor with bent rods. Took a chance and purchased two of the 350mm length units from Spool3D. A BIG 5 STARS for sending me absolutely straight rods. Completely eliminated the z wobble I've been fighting with. VERY HAPPY! Only wish Spool3D offered longer (straight) versions say 400mm rods for another printer I have.

Straight and true

Ordered two of these for my custom Hypercube build. Both arrived straight and in excellent working order.

Z wobble gone!

I ordered these before from another supplier and they were bent!. I got these last week from Spool3d and they are perfectly straight. My prints are completely free from z wobble now . The brass nut that comes with it has a bit of a backlash however, I didn't notice any artifacts because of this in my prints. I might in the future get the anti-backlash nut (sold by Spool3d) but I am happy with it now.
